Office Action Summary

Application No.

10/052,736

Applicant(s)

IKEDA, SATOSHI

Examiner

JAMES C KERVEROS

Art Unit

2133

-- **Th MAILING DATE of this communication appears on the cover sheet with the correspondence address --**
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on September 2, 2004.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3 and 6-32 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 3 and 6-32 is/are rejected.
7) ☒ Claim(s) 3 and 6-21 is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
10) ☒ The drawing(s) filed on 13 January 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
5) ☐ Notice of Informal Patent Application (PTO-152)
6) ☐ Other: _____.

DETAILED ACTION

1. This Office Action is in response to Amendment filed September 2, 2004, in reply to the Office Action dated June 2, 2004.

Claims 1, ~~2~~, 4 and 5 are cancelled. Claims 3 and 6-32 are currently pending in this application, with claims 3, 6 and 22 being independent.

Objections to the claims are withdrawn in view of the corrections made by the Amendment, as required by the Examiner in the prior Office Action dated June 2, 2004.

Specification

2. The abstract of the disclosure is objected to because it fails to comply with the proper language and format for an abstract of the disclosure. A proper Abstract is provided by the Examiner, as follows:

-----The semiconductor testing apparatus includes test pattern memory adapted for storing and managing test pattern data in accordance with addresses, and outputting the test pattern specified by the desired address; test pattern generator for generating a test pattern signal on the basis of the test pattern outputted from the memory; and controller for controlling the test pattern memory and the test pattern generator that the test pattern signal based on the test pattern data of the desired address can be generated at a predetermined timing conforming with a set information.-----

Correction is required. See MPEP § 608.01(b).

Art Unit: 2133

3. The specification is objected to under 37 CFR 1.71 because the specification lacks an enabling description, in reference to the limitation "the set information" recited in the independent claim 3.

Claim Objections

4. Claims 3, 6-21 are objected to because of the following informalities:

Independent Claims 3, 6 and some associated dependent claims in passim recite: "adapted to ..." It has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 3 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification lacks enabling description with respect to claimed limitation of "the set information" recited in the independent claim 3.

Art Unit: 2133

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitation "the set information", which lacks antecedent basis. Also, the term " the set information " in claim 3 is a relative term, which renders the claim indefinite. The term "the set information" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The claimed limitation of "outputting the test pattern of a desired address at a predetermined timing" has been rendered indefinite, by the use of "the set information", since there is no clear linkage between the two limitations.

Regarding claim 3, the phrase "such a manner" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2133

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 3 and 6-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Kurosaki (US 6314536).

Regarding independent Claims 3, 6 and 22, Kurosaki discloses a semiconductor memory testing apparatus and method (1, FIG. 1), wherein a test signal (test pattern signal) S1 is supplied to an IC memory under test (3) and a read-out signal S3 is compared with an expected value pattern signal S2 supplied from the pattern generator 2 in the logical comparator 4, said apparatus comprising:

A pattern generator 2, which includes test pattern memory means for storing test pattern data (expected value pattern signal) S2 and outputting S2 to the logical comparator as specified by an address signal (AD) from the pattern generator.

Also, the pattern generator 2 includes test pattern generation means for generating a test pattern signal S1 on the basis of the (expected value pattern signal) S2 from the test pattern memory means.

Control means (system controller 6) for controlling the test pattern memory means (S2) and the test pattern generation means (S1) in the pattern generator 2, that the pattern generating program stored in the system controller (6) is created, such that the pattern generator 2 generates, in addition to address signals which is supplied to the

memory under test 3, address signals to be supplied to the failure analysis memory 5, at a predetermined timing using the controlling circuit 8, in accordance with the pattern generating program.

Regarding Claims 7-21, 23-32, Kurosaki discloses control means (system controller 6), which controls the timing of generation of the test pattern and varies the cycle period to execute the test pattern of the desired address. The system controller 6 varies the cycle period by controlling circuit 8 which is capable of producing two burst address signals in one test period at twice the pulse repetition rate of the test period signal T1. The controller includes a multiplexer 12 which selects address signal AD at terminal "a" from the pattern generator 2 or the burst address signal at the terminal "b" from the adder 11 and outputs the selected address signal at terminal "c", which is supplied to the address terminal "A" of the failure analysis memory 5 and the memory under test 3. Note that the address signal supplied to the MUT 3 on reading the stored test pattern signal out of the MUT 3 is also supplied to the failure analysis memory 5. Timing diagram, FIG. 2A, shows the first address (ADR0) corresponding to address signal (AD) and FIG. 2C shows the burst address signals produced internally of the memory under test 3, respectively. The cycle period of FIG. 2C is double the period of FIG. 2A.

Furthermore, Kurosaki discloses supplying the input signal of the test pattern (S1) to the semiconductor device MUT 3 after varying the desired address (AD) and the predetermined timing, and detecting whether any failure has been caused or not in the semiconductor device, by comparing the read-out signal S3 from the MTU 3 with an

Art Unit: 2133

expected value pattern signal S2 in the logical comparator 4. A failure signal FD of logic "1" is outputted from the logical comparator 4 to memory 5 in which failure data corresponding to the failure signal FD is stored at an address of the failure analysis memory 5 specified by an address signal supplied to its address terminal "A". After the completion of the tests, the failure data stored in the failure analysis memory 5 are read out, and a failure analysis of the MUT 3 is performed.

Response to Arguments

8. Applicant's arguments filed September 2, 2004 have been fully considered but they are not persuasive. Claim 3 is rejected under 35 U.S.C. 112, both first paragraph and second paragraph, and Claims 3 and 6-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Kurosaki (US 6314536), as set forth in the present Office Action.

In response to Applicant's argument, with respect to the objection to the abstract of the disclosure, the Examiner is providing a proper Abstract in the Office Action.

In response to Applicant's argument, with respect to Claim rejection under 35 U.S.C. 112, first paragraph and second paragraph, with respect to claimed limitation of "the set information" recited in the independent claim 3, the Examiner still maintains the rejection for the following. Even though, the Applicant cites numerous examples of use through the specification, "the set information" is not defined either in the specification or by the Applicant's arguments. The mere description of example of use in the specification does not constitute proper definition for a limitation, for complying with the enablement requirement or for pointing out and distinctly claiming the subject matter

Art Unit: 2133

which applicant regards as the invention, so as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In reference to the limitation "the set information" for lack of antecedent basis, the Applicant argues there is no requirement for any additional antecedent basis because it is acceptable claim language in certain instances when presenting a first occurrence of a term. The Examiner does not agree with Applicant's argument because the lack of antecedent basis renders the claims indefinite, which fails to particularly point out and distinctly claim the subject matter of Applicant's invention, see MPEP 2173.05(e) [R-1] Lack of Antecedent Basis. According to MPEP: "a claim is indefinite when it contains words or phrases whose meaning is unclear. The lack of clarity could arise where a claim refers to "said lever" or "the lever," where the claim contains no earlier recitation or limitation of a lever and where it would be unclear as to what element the limitation was making reference".

In reference to the phrase "such a manner" which renders the claim indefinite under 35 U.S.C. 112, second paragraph, the Applicant argues that the phrase "such a manner" has not been shown within MPEP 2173.05(c) to comply with 35 U.S.C. 112, second paragraph. In response to Applicant's argument, the term "such a manner" is equivalent to the phrase "such as", which renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

In reference to claims rejected under 35 U.S.C. 102(e) as being anticipated by Kurosaki, the Applicant argues that Kurosaki fails to disclose, teach or suggest the

Art Unit: 2133

system controller 6 controlling the pattern generator 2 in such a manner that the cycle period rate to execute the test pattern S1 of the desired address becomes a cycle period narrower than a predetermined rate. Thus Kurosaki fails to disclose, teach or suggest a control means controls the timing of generation of the test pattern in such a manner that the cycle period rate to execute the test pattern of the desired address becomes a cycle period narrower than a predetermined.

In response to Applicant's argument, Kurosaki discloses control means (system controller 6), which controls the timing of generation of the test pattern and varies the cycle period to execute the test pattern of the desired address. The system controller 6 varies the cycle period by controlling circuit 8 which is capable of producing two burst address signals in one test period at twice the pulse repetition rate of the test period signal T1. Timing diagram, Figure 2A, shows the first address (ADR0) corresponding to address signal (AD) and Figure 2C shows the burst address signals produced internally of the memory under test 3, respectively. The cycle period of FIG. 2C is double the period of FIG. 2A.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
